

Suspension fitting for rockwool acoustic panels

Short Description

- Spiral corkscrew type panel hanger for acoustic panels - Ecophon type panels
- Economic alternative to Ecophon panel fixings

Product Images

Spiral corkscrew anchor for acoustic panel suspension

Spiral anchors provide a convenient suspension point for certain types of acoustic ceiling panels made from rockwool which will accept a screw-in corkscrew type fitment. The spiral anchor has a safe working load of 5.9 kg with a 5:1 safety factor.

Acoustic ceiling installers fitting suspended acoustic panels such as some products manufactured by Ecophon or Rockfon (trademarks are acknowledged) often search for lower cost installation components.

The spiral anchor and our associated fittings have proved a successful alternative to the manufacturers' own branded components offering significant savings.

- Spiral anchor suspension fittings can be used in conjunction with our ceiling fixings, suspension cables and adjustable suspension hooks to create a low cost solution.

More Information	<p>Spiral anchors are made from heavy duty zinc plated wire and work like a corkscrew when used with a compatible panel. Rockwool panels used for absorbing reflected sound to cut down reverberation are lightweight and rigid.</p> <p>These suspension fittings can be installed in many ways depending on the actual type of panel. Ceiling installers should test compatibility of the spiral anchor fixing with the particular panels specified for the project.</p> <p>Suspended acoustic panels are used to improve the acoustic ambiance in many spaces including school halls, concert halls, village halls, open plan offices, call centres etc. The introduction of sound absorbent materials can have a massive effect on user's satisfaction with the built environment. A rapid and convenient installation system for acoustic ceiling panels helps builders and specialist contractors suspend panels quickly and reliably.</p>
