Description

Suspension hooks are adjustable

Suspension hooks with self-locking facility are ideal for rapid installation and levelling up on site.

Slide the hook up a support wire (usually 1.5mm dia) and it locks fast wherever it is placed. To lower simply depress the quick release button as shown on the image. The clutch mechanism is released until the suspended item is at exactly the right height. Excess wire can then be snipped off.

It is much easier to level up acoustic panels, light fittings and ceiling hung building services when the adjustment can be performed at the suspension point rather than at the ceiling.

- **Straight hook** is suitable for hanging vertical baffles such as a panel with a suspension hole
- **Safe Hook** has a spring catch across the mouth of the hook to prevent accidental detachment.
- **Bee-line Hook** also has a safety catch and is suitable for heavier loads than the safe hook

More Details about these suspension hooks

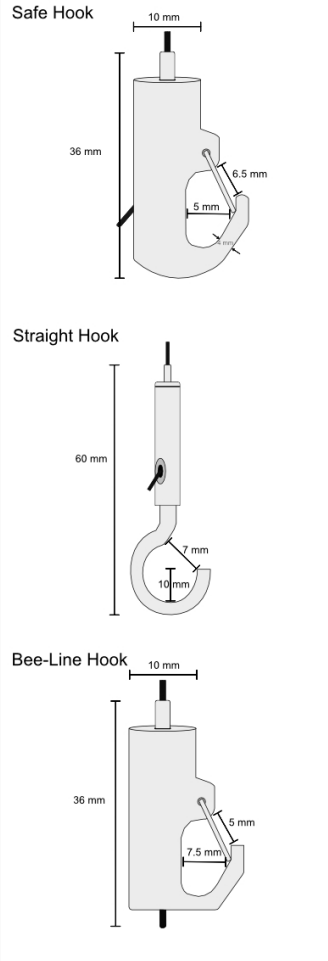

Excess wire should be trimmed with good quality sharp wire cutters to prevent fraying. The wire should only be trimmed once the height of the suspended item has been checked and finalised.

Safe Hook has a safe working load of 6kg

Bee-Line Hook has a safe working load of 15kg

These load ratings include a 5:1 margin of safety and apply when used with a 7x7 construction wire rope with a 1.5mm diameter.
