Description

Floor to ceiling cable kits for double sided snap frames

Adjustable height floor-to-ceiling kits are for supporting double-side snap frames, especially when frames are to be displayed one above the other.

- **The 4m long cable kits** can be cut down to match the ceiling height. Suitable load bearing screw points are required as the lower fitting is used to tension the cable. Special swivel fittings enable fixing to the wall (for instance above a shop window) as an alternative to ceiling/floor installation. Cable sets are sold as a pair as two cable kits are required for each bay. A bay can support a single frame or two or more frames of the same size in a stacked arrangement.
- **Stopper is a screw-in fitting** for double-sided snap frames which allows easy height adjustment. The wire passes through the fitting. By depressing the top button the cable is released and the height may be adjusted. Once released the internal clutch mechanism inside the fitting grabs the cable securely. One pair of Stoppers is required per snap frame.

Additional Information

| | |
|------------------------|--|
| More Information | <p>The finish of Stopper fittings is shiny chrome. The cable kits are silver.</p> <p>Floor to ceiling cable kits require fitting with care to ensure the cables are exactly the right distance apart and are plumb vertical. Please consult a tradesman if in doubt about any aspect of the installation including an assessment of whether the ceiling offers suitable scope for screw fixings.</p> <p>When the length of the cable is correctly adjusted the (longer) barrel with screw thread is wound up to provide tension in the cable.</p> <p>The Stopper fittings are screwed into the double-sided snap frames in place of the hanging eyes.</p> <p>The wire cables are threaded down through the Stoppers to emerge at the lower edge of the snap frame, before the cables are finally connected to the floor fittings. Each Stopper incorporates a clutch device to grab the cable. Depressing the button (where the cable enters) releases the clutch to provide height adjustment of the frame. Once the height is correctly set a collar is done up finger tight to prevent accidental release.</p> |
| Delivery and Returns | <ul style="list-style-type: none">• We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery.• Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem.• For detailed information about Delivery charges or Returns and refund policies, please click on the links below. |
