### Standoff wall fixings for sign panels - various colours

**Fisso Rapid** Standoff sign fixings offer a smart tamperproof solution to fixing your small to medium size graphic panel to any interior wall.

Super sleek design combined with ease of use makes these standoff fixings a great choice for displaying any rigid sign or display panel spaced slightly away from the wall, creating an attractive shadow line to enhance the 3D effect. Italian designed sign fixings are available in a superb range of colours to complement any decor.

The body of the standoff wall fixing stands your panel 23mm away from the wall. The small 15mm fixing head is stylish whilst unobtrusive. Suitable for sign fixing of drilled rigid panels indoors.

Panels are not supplied

Fisso Rapid standoff wall sign fixings are available in the following anodized aluminium colours.

- **Chrome** (shiny polished)
- **Silver** (matt silver)
- **Gold** (shiny polished)
- **Matt Copper** (a trendy finish)
- **Steel** (look of stainless steel)
- **Venetian Brass** (classic look of antique brass)

See also [stainless steel stand off fixings](#) especially if you need an outdoor solution.

**Fixings are priced individually**

### How to fit standoff wall fixings:

- 1) Each panel is normally fixed using four stand-off fittings. However different numbers of fixings can be used at the customer's or installer's discretion, hence the fittings are priced singly.
- 2) The panel to be displayed can be virtually any size but must be rigid, up to 12mm thick and normally weigh less than 10kg (unless extra fixings are used or the design is checked by an experienced installer). The Rapid is normally used for small or mid-sized panels. Two-layer panels of clear acrylic can be used with a printed graphic sandwiched between them. Alternatively, single layer panels can be made from acrylic and other rigid plastics, or in some cases toughened safety glass, aluminium composite sheet, anodised aluminium panels etc.
- 3) 9mm dia holes should be provided in the panel, normally close to each corner. The shaft diameter of the fitting is 8mm but a 9mm hole allows a small misalignment tolerance.
- 4) The panel is offered up to the wall and the hole centres are marked onto the wall. The fixing holes can then be drilled and a wall plug inserted. If the wall is other than masonry (with or without plaster) a different screw fixing method may be required - please consult a tradesman.
- 5) The body of each Fisso Rapid stand-off fixing is then screwed to the wall. The graphic panel is then secured to the body by introducing the shaft into the body of the fitting, inserting the supplied black rubber grommet behind the panel to cushion the panel and achieve a tight rattle-free fit. The smoothly rounded head of the fitting holds the panel in place.
- 6) A locking grub screw can then be tightened by inserting the supplied Allen key from the side while pressing the front of the fitting so that the panel is firm and rigid. The clever design of the shaft is designed to spread with a few turns of the Allen key, locking the panel in place.

#### More Information

#### Delivery and Returns

- We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery.
- Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem.
