Description

Lightweight hanging plastic screen

Flexi Screen is a great value flexible hanging sneeze screen - now featuring the same thickness clear plastic as our higher specification Suspended Protection Screens but with simpler hanging accessories suitable for almost all types of ceiling.

The clear plastic screen is made from 700 micron PET. Although flexible this is a tough material which won't rip

or tear in normal use. The screen material is clear so visual contact is unimpeded - although not quite the same visual quality as rigid acrylic sold at a significantly higher price. Harmful droplets sprayed by sneezing, coughing and even speaking are blocked from a direct transmission path. A sneeze-guard screen offers reassurance to all concerned.

Advantages of a hanging sneeze guard

When there is no space for an acrylic sneeze guard stood on a desk or table a hanging protection screen could be the answer. Flexi Screen is a more affordable option which will perform well as a low cost divider for shop counters, hairdressers and beauty salons, nail bars, offices and more. The bottom of the sneeze guard can be set at the exact gap you require. When countertop space is limited it may not be practical to stand a bulky acrylic sneeze guard on the counter or desktop. However be aware that suspended screens can get caught in gusts of wind, so we do not recommend their use close to an outside door.

Flexible protective screen details

Flexi Screen hanging protection screens are stocked in two practical sizes:

- 85 cm wide x 85 cm high protective screen is suitable for narrower gaps and direct face to face protection seated or standing when customers or co-workers approach from the front. It is also suitable as an isolation screen between seats in a waiting room.
- 120 cm wide x 85 cm high creates a wider sneeze screen for use, for example, between facing desks in an office or over the top of a trade counter or reception desk.
- The pre-cut PET screen is packed in a flat cardboard box together with the top and bottom silver aluminium rails. Fitting the screen is a breeze using the concealed plastic grippers supplied. See Assembly and Installation tab..

Hanging accessories included for flat ceilings or suspended ceilings

- The versatile suspension kit employs fixings and extendable wires commonly used for hanging lightweight point of sale materials in shops.
- This hanging kit is very easy to use without needing to drill any holes in the ceiling. It is adequately strong in normal use providing people aren't constantly tugging at or bumping into the screen.
- The lightweight 2-wire universal hanging kit provides you a choice of ceiling fixing (adhesive buttons and ceiling grid clips) plus Jet Set wires - which you can stretch to the length required and they will then support the weight of the screen at the selected height. (We include a couple of spare JetSet wires in case you over-stretch the wires first time around!)
- When fitting to suspended ceilings the screen does not have to line up with a grid - it can run crossways under two or more ceiling bars.
- If you prefer to upgrade to a more permanent and adjustable hanging wire system please see our [Suspended Protection Screen](https://www.sign-holders.co.uk/virus-protection/protection-screens-shields/lightweight-hanging-protection-screen.html). The screen itself is identical to the one on this page. The only difference is the hanging wires and fittings.

Hanging Kits

The light-duty universal hanging kit supplied with the basic kit works well and is easy to use. The drawback in some situations is that the suspension wires cannot be shortened once over-stretched (which is why we include a couple of spare Jet-Set extendable wires).

Jet Set wires look like tightly coiled springs – they are well tried and tested and are capable of supporting Flexi Screens at any pre-determined height. You simply stretch the wires by hand to the length you require (ensuring both wires match to ensure the screen will hang level). Firm force is required to extend the wire – get hold of the wire in two hands a pull until you achieve the length you require – up to a maximum of 2 metres!

To achieve height adjustment without Jet Set wires (plus the possibility to change your mind) we offer an upgraded version called a [Suspension Protectin Screen](#). It comes in two versions. One is for conventional plaster ceilings – the other attaches to the grids of a standard suspended ceiling.

More Information

Fitting the screen to the top and bottom rails

Attaching the PET screen to the poster bars is simple and reliable. Push the small plastic grippers (packed inside each bar) onto the top and bottom edges of the sheet. Then thread into the aluminium extrusion, as pictured here.

Assembly and Installation

Delivery and Returns	<ul style="list-style-type: none"> • We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery. • Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem. • For detailed information about Delivery charges or Returns and refund policies, please click on the links below.
