Description

Turns a FreeStander into a temporary barrier post

Add-on Guardian bracket is designed specifically to fit our FreeStander adjustable height floor sign stands. The slip-on bracket enables link chains to be attached.

This simple bracket is useful for upgrading black FreeStanders when needed to section off an area or restrict visitors. This product is not 'refined in appearance' but it serves a pupose for existing owners of FreeStander sign stands purchased from Green Magic (Sign-Holders).

It is extremely unlikely to fit any other manufacturers' products or other post.. Please only order it if you have confirmed the tube it needs to fit onto has an external diameter of 22mm

The price quoted is for a black Guardian bracket (without chain). Low cost plastic link chain is available in various colours (including red, black and white) and in various reel lengths from many suppliers.

To fit the bracket:
Slide the bracket onto the upper part of the telescopic pole below the T-piece. You can release the lever clamp to remove the upper pole to gain access. The bracket should turn resonably freely.
