Description

Dual-use brackets for securing screens

These brackets for perspex screens clamp securely onto a range of tabletop and desk thicknesses. The special feature of the dual-use bracket is that the acrylic screen can be secured across the table or along the front-side or end of the table.

This clever design of bracket resolves situations where social distancing screens must be secured in different

ways. A single pair of clamps can prove highly versatile making for simple and reliable installation.

Multi-purpose clamps

- Suitable for mounting social distancing screens onto tables in cafeterias and in hospitality venues. Perfect for attaching semi-permanent screens to office desks, reading tables in libraries, in seminar rooms or on shared work benches.
- Dual-use brackets accommodate table and desk thicknesses up to 40mm. The table or desk must have an overhang of 50mm (2 inch) for the clamp to attach securely.
- A simple hand-wheel tightens the clamp onto the table which is not marked or damaged due to the integral protective foam strips.
- The screen direction can be adjusted simply by loosening the clamp and re-positioning the right-angle gripper plates.
- Acrylic, plexiglass or other clear rigid material including glass can be secured with ease. Foam inlay strips grip and protect the panel..
- The price shown is for a pair of clamps. The clear panels which can be between 2 mm and 8 mm thick are not included. These should be sourced separately in a size and thickness to suit the job in hand.
- The brackets are made from durable steel with a smart silver-grey powder-coated finish.

Alternative acrylic brackets

We stock alternative brackets for securing protective screens onto tabletops. The alternatives are designed specifically for either cross-table divider screens or table-edge screens. Please see links below. The table-edge design attaches the panel to the front or end of a table, as opposed to the table top. This maximises the space remaining on the table or desk top.

Clamping range diagram

The illustration shows the range of table thickness and acrylic thickness which can be accommodated by these multi-purpose clamps.
