## Description

---

### Medical screens which offer privacy in any environment

Our medical privacy screens are more stylish than regular hospital screens. They can be used as mobile privacy screens in many different environments. As well as offering medical screens on wheels there is a freestanding privacy screen supported on stable feet. The screen is light enough to be carried by one person, yet sturdy enough to be used in a busy medical or non-medical space as a free standing unit.

## Screens provide privacy and protection

This modular privacy screen stands 2m tall which helps reduce airborne transmission of viruses between people separated by the screen. Each privacy screen is 1m wide. The support frame and feet are both finished with white paint providing a tough and easy-clean surface.

The screen panel is white PET plastic which can also be cleaned with regular disinfectants. Hospital screens with a hygienic rigid white panel are more practical than drapes. In a clinic, school, beauty salon or lateral flow testing facility these privacy screens offer a more pleasing appearance than basic hospital screens on wheels.

Freestanding privacy screens can also be used in shared rooms – for example in double rooms in care homes or shared rooms in hostels.

When not in use these floor standing screens can be nested, thus taking up little storage space. They can be used in changing areas and link kits are available to order if required. Because these opaque screens are light and easy to move they do not interfere significantly with floor cleaning operations.

Product Dimensions	<p><b>Dimensions</b></p> <p>There is only one size of privacy screen: 2m high x 1m wide. Screens can be stood in a line, the ends butting up to one another, to create longer privacy barriers or dividers.</p> <p>The overall height of the screen (without castors) is 2006 mm and the overall width is 1000 mm.</p> <p>The thickness of the solid white PET panel is 1 mm.</p> <p>The feet are 400 mm long, centred under the screen. So they protrude out either side of the screen by approx 20 cm. This provides sufficient stability for normal traffic areas indoors, away from automatic doors which can cause significant gusts of wind. The screens are not intended for use outdoors.</p> <p>The vertical uprights are 40 mm deep by 38 mm wide (i.e, viewed from the front).</p> <p>The feet are made from 6 mm thick steel (powder coated) and supplied with protective plastic glides on the undersides. They are equipped with holes at all four corners to allow the fitting of castors to create the version with wheels.</p>
Delivery and Returns	<p><b>Special considerations for privacy screens</b></p> <p>Floor standing protective screens are boxed individually. The box is very large (but light to carry) as the unit is shipped pre-assembled (apart from the feet). We recommend getting them delivered to the final destination - they are too large to transport in a car. It is vital to retain the original packaging until the units have been assembled and checked.</p> <p>When buying in quantity we ship the boxes on a pallet: 9 boxes fit on one pallet.</p> <p>You do <b>not</b> need pallet handling facilities. The driver will use a tail lift vehicle to get the pallet to the curbside. You can easily open the outer protective packaging and carry the individual boxes indoors.</p> <p>Free of charge UK mainland delivery (applies to UK Zone 1)</p> <ul style="list-style-type: none"><li>• We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery.</li><li>• Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem.</li><li>• For detailed information about Delivery charges or Returns and refund policies, please click on the links below.</li></ul>
