

Adjustable double loop suspension kit

Short Description

- Adjustable suspension kit for hanging signs, blackboards etc. from a pole, beam, or rafter
- A double loop suspension kit lets you create a wire loop at the top and bottom of the wire
- Galvanised wire is 2m or 3m long but can be adjusted down to any length (and excess cut-off)

Double loop hanging wire kit offers great flexibility

This multi-purpose suspension kit consists of a strong yet slender wire with a pre-formed loop at one end and a loop-maker fitting, called an Urban Trapeze, at the other end to create a second loop.

- The double-loop suspension kit is very versatile and can be used for many purposes, ranging from suspending signs and blackboards from an overhead hanging rail or pole to suspending plants or decorations from roof beams, pipes, trunking or trusses.

Fully adjustable loop-over suspension kit

- The loop-end cables are 2m or 3m long – so that is the maximum 'drop' for this kit.
- The wire is only 1.5mm thick so the suspension system is very neat and discreet.
- The safe working load is 15kg per wire (the breaking strain is considerably higher, but we always recommend a 5-fold factor of safety for overhead hanging).

The pre-formed loop can be hung from a ceiling hook (for example a magnetic hook). However, generally, the small loop is used to create a lasso over the top of a pole or beam with the tail of the cable threaded back through the loop and pulled tight.

The second loop is created using a clever self-locking fitting called an Urban Trapeze. The function is similar to a Gripple fitting but the styling is superior – important when the fittings may be 'on show' in retail, hospitality, home or office environment. The function is shown in the image section – the wire is introduced through one port of the Urban Trapeze, threaded around whatever you wish to hang, and passed back up through the second port. It grips automatically but the gripper mechanism can easily be released for adjustment with fingertip pressure on either release button.

- This wire suspension kit (Order code UT.KIT.H) comprising a single 2m loop end cable and an Urban Trapeze fitting has a silvery finish. A black alternative is also available (Order code UT.KIT.H-B).

More Information	<p>What can this suspension kit be used for?</p> <p>The kit can be used either way up i.e. with the gripper fitting at either the top or the bottom.</p> <p>The top fixing requires there to be a pole, rail, beam or hook in place. Alternative kits are available for screwing to a ceiling.</p> <p>The gripper fitting (Urban Trapeze) allows you to create virtually any size loop so it is very versatile. For example the wire can be looped through holes drilled in a blackboard or panel without worrying about whether a specific hook will fit the hole. Double loop suspension kits can be used for hanging lighting, decorative panels, aerial sculptures or large mobiles, hanging planters and much more besides.</p>
Assembly and Installation	<p>Easy assembly</p> <ul style="list-style-type: none">• Assembly and installation is very quick and easy.• Excess cable can be coiled up or cut off using wire cutters.• The release button to disengage the gripper (if further adjustment is required) is shown in the animation image on this page
Delivery and Returns	<ul style="list-style-type: none">• We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery.• Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem.• For detailed information about Delivery charges or Returns and refund policies, please click on the links below.
