Description

U-channel fixing strip for plastic poster frames

Grip Strip is a clear plastic U-shaped channel specifically intended for screwing onto wooden displays to hold plastic Slim Frames. Grip Strip is popular in the garden centre industry for securing frames onto wooden plant benches. The frames are a firm push fit and are held securely.

- The U-channels are pre-drilled with a series of holes to facilitate fixing with screws.
- Grip Strip is sold online in full 40m packs. There are 20 pieces each 2m long in a pack.
- Grip Strip is designed to fit A5, A4 and A3 Slim frames only.

Grip Strip is extruded in clear (slightly frosted appearance) PVC and can be used successfully outdoors or inside. It can easily be cut to length - plastic pipe cutters or secateurs are suitable.

Grip Strip is perfect for securing bed card holders

Grip Strip is a product unique to Green Magic Co. We supply this U channel as part of our outdoor signage system for garden retailers.

The clear plastic channel secures our Slim Frame bed card holders with a firm push fit. We have developed this product over many years and it has become a standard option to many of the UK garden centre benching manufacturers. Grip Strip is designed for use with Green Magic Slim Frames - only the Slim Frames will stay firmly in place on a windy day. Whilst initially it may seem more expensive than traditional bed card tracking in densely packed A-Z areas the system pays for itself as the point of sale stays protected from the wind and elements, no more picking the bed cards up off the floor every morning! When the stock changes location just take the slim frame with it and plug it into the new location.

When bed cards are spaced further apart, Grip Strip displays come into their own as the lowest cost and most versatile method to display 8x6 inch and A5 bed cards professionally.

More Information	How to use Grip Strip Grip Strip is designed to be screwed through the base of the U-channel section. Pre-punched holes at regular spacings provide labour saving starter holes for screwing. We recommend screw fixing about every 400mm using small wood screws (not included). The channel can be installed face up or down. Outside it is best if the channel faces downwards to avoid it filling up with debris. In outdoor situations it is important that the frame is backed by a board, trellis etc. so that wind does not dislodge the frame. Indoors frames can protrude from Grip Strip without any other means of support – either standing up from a gondola top and sticking out from a wall or column. The frames are simply pushed into the Grip Strip and they hold tightly yet can be removed by pulling out at right angles. Grip Strip is also known as a plastic U-channel sign holder system. Grip strip is a clear PVC product that has had extra Ultra Violet stabalisers added to the raw material. Length of life will ultimatly depend on how much sun the product recieves throught the day. The general rule of thumb is when the strip gets brittle it's time to replace.
Delivery and Returns	• We offer a choice of delivery options tailored to the goods selected and your location, calculated for you automatically in the Checkout. When feasible, you will be offered options for Free, Economy or Next Day delivery. • Any product returned by the purchaser must be unused and in its original packaging, which should be unmarked. If goods are received damaged or faulty we will take care of the problem. • For detailed information about Delivery charges or Returns and refund policies, please click on the links below.
