### Ceiling anchors with panel hanging fittings - Height adjustable

Ceiling attachment panel hangers with easy height adjustment are very convenient hanging sign fixings for the installer. These hanging kits are currently in high demand for suspending perspex screens for social distancing.

These elegant sign hangers suit rigid sign substrates up to 5mm thick and are available with a choice of ceiling fixings.

Perspex is a brand of acrylic, which is one of several types of clear rigid. the plastic used for suspended protective screens. Our panel grippers can equally be used for hanging screens made of polycarbonate or rigid PET.

Domed satin silver ceiling and panel fixings feature a self-locking mechanism that saves time and effort when suspending signs, panels and graphics from a ceiling. A clutch release button makes levelling up a breeze. The height is adjusted at the panel rather than at the ceiling - much more convenient!

- Panel Gripper includes a nylon-tipped grub screw to grip panels securely (no drilling of panels required)
- **Select the correct kit for your ceiling type:**
  - Plaster and wood ceilings use **Screw Ceiling Anchor** (SCA) kits  
(with either 1m or 2m length cables)
  - False ceiling grids use **Twister Ceiling Anchor** (TCA) kits  
(with 1m cables)
- The 1.5mm diameter galvanised wire cables are strong and ready to use (terminated) - no crimping required. Simply snip off excess following final adjustment.
- NOTE: **2 kits** are required to suspend **1 panel** or sign.
- 1 Allen key is included for every 10 kits purchased extra 3mm keys are available in the price grid.
- Easy installation with adjustable height fittings.

### More Information

Good quality wire cutters are required to cut off surplus wire after final adjustment.

#### **Applications, load ratings and other ways to buy fittings**

- These adjustable sign hanger kits can also be used in art installations, in shop window displays as well as in industrial applications such as suspending safety signs.
- The SCA ceiling suspension kit is easily fitted to a ceiling or underneath any horizontal surface, using the screw and plug kit provided (depending on the surface). You must ensure that the surface you are screwing into is capable of holding the weight of the item you are intending to hang. Our quoted load ratings include a 5:1 margin of safety - and the ceiling fixing should do likewise.
- The TCA suspended ceiling fixing is easily fitted to a 25mm false ceiling grid - it simply twists on to the white metal grid creating a secure and reliable attachment. Although the fitting itself can easily hold a weight of 6 kg your ceiling grid may not be designed to take such a weight. It is worth checking with your false ceiling installer as to what is your ceiling's safe hanging load.
- The Panel Gripper fitting itself is capable of holding up to 6 kg when the suspended substrate can be indented slightly by the grub screw. Very hard panels such as glass require special consideration. The 1.5mm galvanised wire (7x7 construction) will carry these loads safely. However some ceilings may not take such loads without reinforcement or the use of specialist fixings in place of the screws and plastic plugs supplied. If in doubt please consult a skilled tradesman or professional.
- We also have other ceiling fittings designed specifically for fastening to suspended ceilings and for attaching direct to a concrete ceiling using an expanding anchor. These various fittings and sets are also available as individual components - ideal for contractors such as builders, shopfitters, electricians, sign installation companies or acoustic ceiling installers.
