

Rigid panel hangers for up to 10mm

Short Description

- Hanging kit for panels up to 10 mm with choice of ceiling fixings
- Adjustable height panel gripper kit for hanging signs from ceilings

Product Images

Description

Large panel hanging fittings with wires and ceiling anchors

Large capacity panel hangers with easy height adjustment offer a convenient way to hang thicker substrates and sign panels up to 10mm thick.

These panel hangers suit rigid sign substrates from 6mm to 10 mm thickness and are available with a choice of ceiling fixings.

Domed brushed silver ceiling and panel fixings feature a self locking mechanism that saves the installer time and when hanging signs, panels and graphics from a ceiling. A clutch release button makes levelling up a breeze. The height is adjusted at the panel rather than at the ceiling - very convenient!

- Large Panel Gripper (LPG) fits over the panel which should be pre-drilled. A small machine screw and nut are supplied to support and secure the substrate.
- **Choose the correct kit for your ceiling type:**
 - Plaster and wood ceilings use **Screw Ceiling Anchor (SCA)** kits (with either 1m or 2m length cables)
 - Suspended ceiling grids use **Twister Ceiling Anchor (TCA)** kits (with 1m cables)
- The 1.5mm diameter galvanised wire cables are strong and ready to use (terminated) - no crimping is required. Simply snip off excess.
- NOTE: **2 kits** are required to suspend **1 panel** or sign.

More Information

Good quality wire cutters are required to cut off surplus wire after final adjustment.

Applications, load ratings and other ways to buy fittings

- These adjustable large panel hanger kits can also be used in art installations, in shop window displays as well as in industrial applications such as suspending safety signs.
- The SCA ceiling suspension kit is easily fitted to a ceiling or underneath any horizontal surface, using the screw and plug kit provided (depending on the surface). Please ensure that the surface you are screwing into is capable of holding the weight of the item you are intending to hang. Our quoted load ratings include a 5:1 margin of safety - and the ceiling fixing should do likewise.
- The TCA suspended ceiling fixing is easily fitted to a 25mm false ceiling grid - it simply twists on to the white metal grid creating a secure and reliable attachment. Although the fitting itself can easily hold a weight of 6 kg your ceiling grid may not be designed to take such a weight. It is worth checking with your suspended ceiling installer regarding your ceiling's safe hanging load.
- The Large Panel Gripper fitting itself is capable of holding up to 6 kg. The 1.5mm galvanised wire (7x7 construction) will carry these loads safely. However some ceilings may not take such loads without reinforcement or the use of specialist fixings in place of the screws and plastic plugs supplied. If in doubt please consult a skilled tradesman or professional.
- We also have other ceiling fittings designed for attaching direct to a concrete ceiling using an expanding anchor. These various fittings and sets are also available as individual components.
